

LifeLine — Go-to-Market Mini-Plan

Personal Safety & Check-In | Safety in one tap
Group 39 · Phoenix Cohort · TS Academy PM Capstone | v1.0 · 22
May 2026

1. Positioning Statement

For female undergraduates and young adults who move alone at night, LifeLine is a personal safety companion that lets them instantly share their journey with trusted people — and escalate emergencies in one tap. Unlike WhatsApp share-location or police hotlines, LifeLine provides structured journey tracking, missed-check-in detection, and trusted-contact escalation in a single, low-friction flow tested on Nigerian mobile networks.

2. Beachhead Market

Pilot campus (Phase 1): University of Nigeria, Nsukka (UNN) Ada Umeh (primary persona) is a UNN student — discovery evidence is grounded here first. Phase 2 expansion: University of Lagos · Lagos State University	Why students first: • Daily safety concerns validated in discovery (6 real interviews) • Tight-knit hostel/departments communities — high organic referral • Heavy smartphone usage; fast feedback cycles vs professionals • Primary message: “Never walk alone — even when physically alone.”
---	--

3. Acquisition Channels

	PRIMARY — Campus Ambassador Programme	SECONDARY — Referral Loop + Social Content
Campus Ambassador Programme	50 student ambassadors (hostel leaders, dept reps, influencers). Each acquires 30–50 users → 1,500–2,500 organic users. Rewards: referral bonuses, data bundles, leaderboards.	S1 — Built-in Referral Loop: Trusted-contact invite IS a referral. Each contact receives: “Ada added you — download LifeLine.” Each user brings 3–5 contacts. S2 — Social Content: 3–5 posts/wk (TikTok, Instagram) — POV safety scenarios. Low cost, high campus shareability.

4. Rollout Strategy & Pilot Plan

Phase	Detail
Soft Launch Weeks 1–4 (post-V2)	Audience: 300–500 UNN students + close-network early adopters. Goals: test alert delivery (< 5s), validate onboarding completion, measure safe-arrival session rates. Track: session completion, contact additions, false alert rate.
Public Launch Weeks 5–12 (post-V2)	Campaign: #ArriveSafeChallenge — students post “Reached home safely” + screenshot. Channels: student WhatsApp groups, campus events, micro-influencers, student unions. Prizes: data bundles, transport vouchers. Success gate: 2,000–5,000 users, ≥ 40% Day-30 retention.

5. Onboarding Plan

Funnel: Install → OTP verification → Add ≥ 1 trusted contact → First test safe-arrival check → Weekly habit. **Two hard gates (non-skippable):** users must add at least one trusted contact AND complete one test safety session before exiting onboarding. This prevents the “downloaded but never used” failure mode common to safety apps.

6. Feedback Loop & Retention

Trigger	Mechanic	Feedback into product
Late evening / missed check-in	Push: “Travelling tonight? Start a safety session.”	Check-in freq tracked; drop triggers onboarding-friction audit
SOS cancelled within 2:45 window	False-positive rate logged; badges (Safety Streak, 10 Safe Arrivals)	FP rate > 15% triggers SOS UX review
Day-30 retention < 40%	Re-engagement push + ambassador peer outreach	Churn cohort qualitatively interviewed; insights fed to sprint backlog

7. First 90-Day Success Metrics

Metric	Target	Source
Registered users	2,000–5,000	Full GTM Plan §1
Day-30 retention	≥ 40%	PRD §6.4
Weekly safety action rate	≥ 60% of WAU	Metrics Plan §3.2
Alert delivery	< 5 seconds	PRD §11.2
False alert rate	< 10%	PRD §6.3

8. Honest Gap Flags (GTM backlog — Y1 Q1–Q2)

These gaps do not block the capstone submission. They represent the GTM team’s backlog before public launch.

Gap	Why it matters / next step
CAC & unit economics not modelled	Ambassador programme costs (data bundles, merchandise) not costed. Estimate before Phase 2 scale-up to avoid budget blowout.
Premium pricing (¥1,000–1,500/mo) not user-validated	No willingness-to-pay research done. Run Van Westendorp survey with 30 UNN students before activating Premium tier.
Partnerships named, not yet contacted	Bolt communities, NGOs, UNN Student Welfare listed but no warm intros documented. Assign one owner with a 30-day outreach target.
Crisis response protocol undefined	If a real SOS results in harm, who speaks to press/family/police? Critical policy gap for any live safety product.
No paid acquisition baseline	Plan is 100% organic. Even a ¥50K Meta Ads test would establish a CAC baseline vs ambassador organic spend.
